## News Release

May 26, 2011

### **RealMed Facilitates Faster Payments by Embedding Claims Reconciliation Capabilities**

**INDIANAPOLIS, IN**— [RealMed](#), a leading provider of revenue cycle management solutions for the health care industry, is pleased to announce integration of its award winning capabilities with [Epic](#). The integration provides Epic billing software clients with seamless access to RealMed's powerful claims editing and error management tools from within the same interface used for processing claims today. The result is cleaner claims and fewer rejections by the health plans, speeding the critical payment process for the physician practice.

Epic clients who use the RealMed services receive notification of claim errors with easy-to-understand messages for correcting the claims. When corrected, the user simply resubmits the claim using their system and RealMed manages delivery to the health plans. The process leverages the familiar user interface, workflow, and standard queues.

The integration also facilitates access to RealMed's all-payer eligibility and benefits application. This enables users to verify eligibility and benefits in advance of appointments and to check walk-in patients during the registration process.

"Our clients and prospects are excited to learn that they are now able to use RealMed's revenue cycle services within the Epic billing software," said Scott Herbst, senior vice president of business development for RealMed. "The workflow enhancement is a real benefit and they still benefit from the outstanding service and support of our field teams."
